Power Your Business

Microsoft Dynamics 365 Business Central

One solution for the
whole company

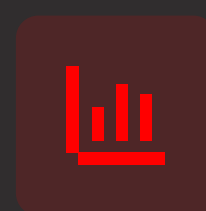

As one of the most widely used tools in modern businesses across all industries, it allows you to find everything you need to run your business successfully in one place. Create a holistic view of your business, including sales, purchasing, finance, manufacturing, services, inventory, human resources, facilities, and projects.

Sales

manufacturing

How will the solution help you?

Overview of your company's finances	Manage your money better than ever before. Manage cash flow, fixed assets, budgeting and company expenses in a simple and efficient way, tailored to your business, regardless of currency, consolidation, or local laws. Reports on sales, purchases or stock are more transparent with Power BI, so you can make your business decisions with greater confidence.
Improve your sales process	Segment your customers and clients to match the sales, after-sales or cross-sales activities of your sales team. You can create individual pricing and discount structures for specific groups of customers and track your communications with them via the integrated Outlook email interface.
Optimise purchasing and warehouse activities	Ensure your warehouse is always optimally stocked by working with current orders and sales order forecasts based on the sales plan, or with automatic material orders when they run low. Organise your warehouse to determine the best possible storage location for a product or material based on the type, weight, dimension and capacity of a specific space in the warehouse or shelf.
Ensure maximum production results	Implement different production processes according to your production plan, regardless of the type or difficulty of your business. Create bills of materials with predefined raw materials, semi-finished or finished products that are part of a product or kit. Record material consumption in production, reconcile deviations, and discards.
