

# Power Logistics

Powered by **allforteam**

## An efficient solution for your delivery staff

With this modular solution, you can improve part of your logistics process, reduce errors, increase distribution efficiency, and improve customer satisfaction. With PowerLogistics you create a product list that automatically generates a delivery note in ERP, i.e. the Business Central system.

# How will the solution help you?

## Electronic signature

Sign documents on your mobile phone with a hands-free signature app for delivery notes and documents that the delivery person needs, and so do business with customers more efficiently and securely. If the delivery of a parcel fails the delivery person can indicate this, and your signature is automatically stored electronically on the delivery note.

## Complaints

Resolve complaints quickly and easily. PowerLogistics allows you to resolve complaints about damage or other inconveniences immediately after delivery. Mark the product as rejected due to a complaint via the interface. You take a photo of the damage via the app, which attaches the photo to the relevant delivery note.

## List of delivery notes

Scan the code on a parcel or group of parcels to find out which delivery note and customer it belongs to. This will give you a list of the products in a delivery note. For larger orders, you have the option of signing several orders at the same time. The attached documents are available in PDF format.

## Connectivity

The database is directly connected to the ERP system, i.e. Microsoft Dynamics 365 Business Central, which enables synchronised operation with the modular solution PowerLogistics. All documents, signatures, deliveries and receivables are available in a single system.

+ Modular design

+ Android system

+ Barcode and QR reader

+ Flexible interface
